Thermal Transfer – Novartis
APPROVED

THERMAL TRANSFER CHOOSE DENCA FOR PLC EXPERTISE

Denca Controls Ltd., the Widnes-based control technologies specialists, have provided two complete PLC control systems for Glossop-based Thermal Transfer, the leading provider of turnkey design and build solutions for the pharmaceuticals industry.

Over recent years, Denca have designed, built and commissioned a number of PLC control systems for Thermal Transfer. This particular project was for use on an extension to a Novartis WFI (purified Water For Injection) plant to increase production capacity.

Selected for their site and control systems expertise, Denca's task involved the provision of two PLC solutions; one to manage a new WFI facility and the other to control a clean room buffer water storage system. Siemens S7 PLCs were chosen for their real-time performance, considerable communications options and easy operation.

Working alongside Thermal Transfer at all stages, Denca's scope of works included the design, manufacture, installation and commissioning of all software, PLC and HMI requirements.

A reputation for quality and value

Established in 1995, Denca Controls Ltd. has become renowned for delivering high quality, value-for-money solutions that enhance performance and embrace leading-edge instrumentation, electrical design and software engineering technologies. The company is recognised across numerous industrial sectors as 'the integrators of choice' and regularly secures repeat business from a wide range of organisations across the automotive, chemical, food & beverage, healthcare, pharmaceuticals and utilities industries. Working with clients of all sizes, Denca provides process control solutions based on custom-designed, fully integrated PLC and HMI software for both mechanical and electrical operations as well as UKAS-traceable calibration and certification services. Denca is committed to the delivery of imaginative, cost-efficient control systems and process automation systems that make a positive impact on production performance.
